📦 npm

👤 PROFILE

Front-End Developer specializing in Vue.js & Nuxt.js & React.js & Next.js ecosystems with proven experience in building scalable web architectures, e-commerce themes, and real-time systems. **Mentors a developer community of 150+ members** across two student organizations, creates technical engineering content on YouTube, and expands into full-stack architectures (NestJS, MongoDB) through production platforms.

🧠 SKILLS

Frontend Core: Vue.js, Nuxt.js, React.js, Next.js, TypeScript, JavaScript (ES6+), Pinia, Vue Router, TanStack Query, Zod.

UI & Styling: Tailwind CSS, Nuxt UI, Vuetify, Bootstrap, SASS, GSAP, shadcn

Backend & Databases: Node.js, NestJS, PHP, Laravel, RESTful APIs, MySQL, MongoDB.

Tools & Architecture: Git, GitHub, Unit Testing, WebSockets, i18n (RTL/LTR).

📁 PROJECTS

SAAF | Enterprise Fintech Ecosystem 📄

- *Tech Stack:* Vue 3, Nuxt.js, Pinia, Pusher, Laravel Echo, WebSockets, Chart.js, SSR
- Architected an enterprise fintech ecosystem delivering 840+ unique views and 1,180+ reusable UI components, decoupling complex state logic into 33 persistent Pinia stores to ensure peak UI performance.
- Engineered a granular two-tier Role-Based Access Control (RBAC) system for the Superadmin Dashboard, securing complex routing and element-level rendering to protect sensitive financial operations.
- Eliminated expensive HTTP polling by integrating Pusher/Laravel Echo via a custom Vue composable, establishing a persistent WebSocket layer for sub-second reactivity on live orders and wallets.
- Optimized the Nuxt-driven marketing landing page for near-perfect Core Web Vitals utilizing full Server-Side Rendering (SSR), auto-compression, and high-performance nuxt-aos animations.

Haze Clue | Real-Time BCI Platform (Graduation Project) 📄

- *Tech Stack:* Nuxt 4, NestJS, MongoDB, Socket.IO 📄, Tailwind CSS, Pinia, Chart.js, i18n
- Architected a full-stack real-time cognitive-monitoring platform processing live EEG data streams from connected BCI devices, enabling instructors to track students' attention levels concurrently.
- Built a secure JWT/OTP authentication system and scalable MongoDB schema on NestJS, supporting real-time data broadcasting via WebSockets with sub-second latency.
- Delivered a bilingual (RTL/LTR) Nuxt 4 frontend with live analytics dashboards.

Smart Learn | Educational Platform (Freelance) 📄

- *Tech Stack:* Vue 3, Tailwind CSS, PrimeVue, Pinia, Axios, Zod, Vite
- Architected role-based dashboards for a freelance educational platform, serving distinct instructor workflows (course/quiz management) and student portals (submissions, certificates).
- Enforced data integrity across complex form flows using Zod schema validation, reducing invalid submissions and backend rejection rates.

Nabeeh | Real-Time Multiplayer Platform 📄

- *Tech Stack:* Nuxt.js, Socket.IO 📄, Nuxt UI, Tailwind CSS
- Implemented real-time multiplayer game logic via Socket.IO 📄, synchronizing live score state across concurrent competitive sessions with no perceptible lag.

🔗 OPEN SOURCE & TOOLS

SaSer CLI (Sarcastic Egyptian Senior Dev) 📄

Node.js, Gemini/Grok AI, 3-Tier Error Handling & Local Caching

- *Tech Stack:* Node.js, Terminal APIs, Caching, AI Integrations.
- Architected and published an AI-powered command-line interface on NPM that intercepts terminal errors, providing context-aware technical fixes.
- Designed a high-performance, 3-tier error resolution architecture with local caching layers to minimize API latency and accelerate debugging workflows.

Athar (Local-First MCP Server) | Open Source NPM Package

- *Tech Stack:* Node.js, Nuxt 4, SQLite, MCP, AI Protocols
- Engineered a local-first Model Context Protocol (MCP) server that autonomously captures AI-generated bug resolutions and transforms them into an actionable developer knowledge base.
- Built a comprehensive analytics dashboard using Nuxt 4 and integrated the SM-2 Spaced Repetition algorithm with a local SQLite database to optimize learning retention.

 PROFESSIONAL EXPERIENCE

07/2025 – 08/2025 Remote	PHP Back End Developer Intern Information Technology Institute (ITI) Designed and implemented secure RESTful API endpoints with authentication, focusing on robust database relational design, optimal routing, and scalable application architecture.
10/2025 – 12/2025 Mansoura	Frontend Developer Azzrk - أزرق - Developed and successfully launched 4 fully customized e-commerce storefronts on the Salla platform, leveraging Twig, Tailwind CSS, and JavaScript to deliver highly responsive shopping experiences. - Accelerated theme delivery timelines by building a centralized, reusable UI component library, ensuring design consistency and high web performance across all client stores.
12/2025 – Present Mansoura	Frontend Developer neop - Engineered and successfully delivered 15+ production applications, ranging from complex administrative dashboards to high-performance landing pages, utilizing Vue.js, Nuxt.js, and Pinia. - Optimized frontend development workflows by introducing reusable component architectures and integrating advanced GSAP animations, significantly elevating the UI/UX and client engagement. - Spearheaded core platform optimizations by implementing multi-layered cache-busting strategies and configuring automated deployment pipelines (Git webhooks, PM2) via RunCloud to ensure zero-downtime releases.

 VOLUNTEERING

10/2025 – Present	Frontend Tech Lead & Mentor CIS Team & CAT Reloaded - Spearheaded frontend engineering circles across leading student technical communities, mentoring members and guiding them through modern web development roadmaps. - Tracked and evaluated weekly technical tasks, conducting thorough code reviews and providing actionable feedback to enforce clean code and architectural best practices. - Authored and delivered a comprehensive 6-session crash course (Technical Gates VI), streamlining the onboarding process for beginners transitioning into frontend development.
-------------------	---

 TECHNICAL CONTENT CREATOR | YOUTUBE (CODING WITH AMEEN)

Technical Content Creator 	Authored highly technical video content educating developers on JavaScript engine internals, browser rendering optimization, and advanced frontend architectures.
--	---

 EDUCATION

10/2023 – 10/2026	Faculty of Computer & Information Sciences - Mansoura University (Transferred from Beni-Suef University) Focused on Software Engineering, Algorithms, Databases, AI, and Web Development. Built projects with Vue.js, Laravel, and SQL; active in CIS Team and CAT Reloaded.
10/2022 – 06/2023	Faculty of Computer & Artificial Intelligence - Beni-Suef University Built a foundation in programming, math, and computer systems using C++ and OOP.
