📦 npm

👤 PROFILE

Computer Science student and Front-End Developer with 1 year of professional experience, specializing in Vue.js and Nuxt.js. Passionate about building scalable, high-performance, and responsive web applications using clean code and modern frontend architectures.

🧠 SKILLS

Front-End: Vue.js, React.js, Nuxt.js, Nuxtui, Twig, Salla, JavaScript, TypeScript, Unit Testing, ECMAScript 6, HTML, CSS, SASS, Tailwind CSS, Bootstrap, Vuetify, Vue Router, Vuex, Pinia, GSAP, Three.js, TanStack Query, Zod, Axios

Tools: Git, GitHub, Unit Testing

Other: English, Research Skills, Freelancing, Project Management, communication, Teamwork

Back-End : PHP, Laravel, Node.js, Nest.js, MongoDB, MySQL, Database, RESTful APIs

Programming : Cs50, C++, C#, Python, OOP, DataStructure, Algorithms

📁 PROFESSIONAL EXPERIENCE

07/2025 – 08/2025
Remote

PHP Back End Developer Intern

Information Technology Institute (ITI)

- Completed a two-month intensive training focused on **PHP** and **Laravel** fundamentals.
- Built and deployed **RESTful APIs** following best practices in security, scalability, and performance.
- Collaborated in team-based projects, simulating real-world software development environments.

10/2025 – 12/2025
Mansoura

Frontend Developer

Azzrk - أزرق

- Developing and customizing **e-commerce themes** using **Twig**, **Salla**, **Tailwind CSS**, **Sass**, and **JavaScript**.
- Building responsive, user-friendly interfaces optimized for performance and accessibility.
- Collaborating with designers and back-end developers to deliver scalable, high-quality UI solutions.
- Continuously improving front-end workflows and contributing to reusable component libraries.

12/2025 – Present
mansoura

Frontend Developer

neop

- Working on frontend development using **Vue.js** and **Nuxt.js**.
- Creating responsive, user-focused interfaces with **Tailwind CSS**.
- Managing application state with **Pinia** and integrating APIs.
- Supporting multilingual and **RTL/LTR** layouts.

🎓 EDUCATION

10/2023 – 10/2026

Faculty of Computer & Information Sciences - Mansoura University

- Focused on Software Engineering, Algorithms, Databases, AI, and Web Development. Built projects with **Vue.js**, **Laravel**, and **SQL**; active in **CIS Team** and **CAT Reloaded**.

10/2022 – 06/2023

Faculty of Computer & Artificial Intelligence - Beni-Suef University

- Built a foundation in programming, math, and computer systems using C++ and OOP.

🤝 VOLUNTEERING

10/2025 – Present

Frontend Head

CIS Team

- Leading the front-end development team and overseeing UI implementation across projects.
- Creating detailed **learning roadmaps** to guide new members through front-end fundamentals and advanced topics.
- Conducting code reviews, mentoring developers, and ensuring high-quality, maintainable code.
- Collaborating with other departments to align front-end tasks with overall project goals.

10/2025 – Present

Frontend ViceHead

CAT Reloaded

- Assisting the head team in managing and supervising front-end activities and sub-teams.
- Organizing and leading **training sessions and workshops** for junior developers.
- Designing structured **learning paths and roadmaps** to improve members' technical progression.
- Contributing to real projects that enhance the community's visibility and members' experience.

PROJECTS

Saaf

Vue.js, pinia, i18n, chart.js, bootstrap, Sass, pusher, laravel-echo, axios

SAAF is a fintech investment platform designed to provide investors with seamless access to various fund categories like real estate and equity, ensuring compliance with Saudi regulations. I developed the complete **secure login flow** and handled complex **user permissions** using Role-Based Access Control (RBAC). Additionally, I implemented real-time fund updates using Pusher and Laravel Echo, created interactive financial dashboards using Chart.js, and managed full localization (i18n) for a secure investment experience.

Haze Clue (Graduation Project)

Nuxt 4, NestJS, MongoDB, Socket.IO, Tailwind CSS, Pinia, Chart.js, i18n

Frontend_Github  Backebd_Github  Developed a full-stack, real-time EEG attention monitoring platform that allows instructors to track students' cognitive levels through connected BCI devices. Architected a scalable backend using NestJS and MongoDB with secure JWT/OTP authentication. Built a responsive, bilingual (RTL/LTR) frontend using Nuxt 4 and Tailwind CSS, and implemented seamless real-time data broadcasting and interactive analytics dashboards using WebSockets and Chart.js.

Smart Learn (Freelance)

Vue 3, Tailwind CSS, PrimeVue, Pinia, Axios, Zod, Vite

View on Github  Developed the complete frontend for a comprehensive educational platform using Vue 3 and PrimeVue. Architected role-based dashboards tailored for instructors to seamlessly manage courses, upload lectures, and assign quizzes, alongside a dedicated student interface for tracking schedules, submitting assignments, and viewing certificates. Implemented robust state management with Pinia, secure authentication cycles, and complex form validations using Zod to ensure a highly responsive and user-friendly experience.

Nabeeh Website

Nuxt.js, NuxtUI, Tailwind.css, socket.io

Developed a competitive gaming platform featuring real-time multiplayer functionality. I implemented the core game logic using WebSockets (Socket.io ), enabling users to compete simultaneously in interactive sessions with live score updates. The project leverages Nuxt.js for optimal performance and handles complex state synchronization to ensure a lag-free experience between players.

Exclusive

Vue.js, Tailwind CSS, Axios, Pinia, Gsap

View on Github  - Built a complete multi-role e-commerce platform (User, Company, Admin) with full CRUD, authentication & role-based permissions, responsive UI, real API integration, and enhanced UX. Collaborated with backend developer using Laravel to deliver a scalable and secure system. Implemented data validation, animations, and smooth transitions to improve user experience and reliability.

Personal Portfolio

Vue.js, Tailwind CSS, Gsap

View on Github  - Rebuilt my personal portfolio (v2) from scratch using Vue.js, Tailwind CSS, and GSAP. Focused on improving usability, refining the design, and adding smooth animations for a more professional feel. A project that highlights my growth as a Frontend Developer and sets the stage for future iterations.

MVLib

Vue.js, Tailwind CSS, Pinia, Axios, Vuelidate

View on Github  - MVLib is an Online Library Management System developed as my final project during my ITI internship, a journey full of learning, research, and challenges. I designed the entire UI/UX from scratch based on my own vision. The system offers an Admin Dashboard to manage books, users, and borrowing activities with role-based permissions. Students can register, browse books, borrow, and manage their profiles and borrowed books.

TECHNICAL CONTENT CREATION | YOUTUBE

Technical Content Creator

Creating educational content on YouTube focused on Vue.js/Nuxt.js, software engineering principles, and accelerating development workflows using AI tools.

OPEN SOURCE & TOOLS

Sa5er CLI (Sarcastic Egyptian Senior Dev)

Node.js, Gemini/Grok AI, 3-Tier Error Handling & Local Caching

Architected an AI-powered CLI tool on NPM that intercepts terminal errors to provide culturally-relevant explanations and technical fixes using a high-performance 3-layer resolution system.
